

Bonding Lug Washer

REDUCE INSTALLATION TIME ... Harger understands time is valuable so we created another quality product to help get the job done efficiently. Simply put, Harger's new Bonding Lug Washer reduces installation time by removing the need for flat and lock washers.

SUPERIOR COMPRESSION ... That's what this lug is all about. The Belleville design is one continuous piece of high strength, corrosion resistant 300 series stainless steel, so the possibility for space or gaps from separate washers is eliminated.

APPLICATION ... Used when attaching compression lugs to grounding busbars.

Part No.	On Center Spacing	Hardware	Outside Dimensions
BLW6S	1"	3/8"	0.75" x 1.75"
BLW4S	.625"	1/4"	0.50" x 1-1/8"

Using conventional flat and lock washers can interfere with adjoining hardware (see figure A and C). The overlapping hardware negatively impacts compression and can create issues with proper bonding. Harger's bonding lug washers not only prevent this interference, they also provide superior compression between the bonding lug and the mounting surface (see figure B and C).
